

Service Factsheet:

Cloudscaler Cloud Confidence Assessment

Our Cloud Confidence Assessment verifies that you have sufficiently mitigated the risks of running workloads in the cloud. It provides independent assurance for key stakeholders and auditors, across the disciplines of security, data, operations and finance.

The Cloudscaler Cloud Control Framework is a best-practice catalogue of risks, AWS controls, processes and guardrails, built through years of working with highly-regulated organisations.

Cloudscaler uses the Cloud Control Framework as the basis for assessing your cloud environment.

How does it work?

The assessment takes 5 days, can be conducted remotely and includes:

- // Automated scans to check cloud controls and structures.
- // Manual checks to cover those aspects which can't be validated by an automated scan.
- // A series of questions to check existing operational procedures.

What do you get?

- // Within days, we'll send you a report summarising the status of your AWS cloud controls and processes against our best-practice target.
- // Prioritised recommendations for improvements that will bring your AWS environment in line with the latest best-practice standards.

An example of the assessment of Operational controls.

Why trust our Assessment?

- // Our Cloud Control Framework is regularly used to assess some of the largest AWS deployments in Europe.
- // It is trusted by customers in highly-regulated sectors such as UK Public Sector and Global Financial Services.
- // It has been used to successfully achieve regulatory approval, identify the root cause of security breaches and spiralling costs, as well as highlight key factors undermining cloud value realisation and stalled migrations.

Pricing

Costs depend on the number of AWS accounts covered by the Assessment.

We recommend clients limit the number of in-scope AWS accounts, as most issues will be duplicated across all accounts. Any remedial work can then be applied across your entire cloud estate.

Pricing starts at £8,000.00 + VAT for an assessment covering 0-5 accounts.

How to get started

To start your journey to cloud confidence, get in touch to book your scoping call:
