Service Factsheet:

Cloudscaler
Landing Zone

A landing zone is a scalable and secure, well-architected AWS platform that enforces consistent use of cloud, in line with the latest best practices.

Landing zones simplify the cloud for development teams, removing the need for highly-skilled AWS resources, by providing pre-approved environments, services and tooling.

Landing zones enable you to rapidly build and launch applications with confidence.

The Cloudscaler Cloud Control Framework is a best-practice catalogue of risks, AWS controls, processes and guardrails, built through years of working with highly-regulated organisations.

How does it work?

When we have gathered the information required to deliver your specification, your Cloudscaler Landing Zone (CLZ) build is automated.

The build applies our Cloud Control Framework to your requirements and is based on our own Compliance as Code product.

Your CLZ will be ready in days and will include a catalogue of AWS controls, processes and guardrails across the disciplines of security, data, operations and finance.

Why choose Cloudscaler Landing Zone (CLZ)?

// Speed: CLZ enables you to start using cloud rapidly, it can be deployed and configured within days.

// Best practice built in: you get a solution based on our Cloud Control Framework which has been developed through years of experience.

// Accelerated developer experience: pre-approved services and tools enable your dev teams to spend less time configuring cloud environments and start working more quickly.

// Scalability: with a centralised platform, new environments can be up and running in minutes as required.

// Optimal risk mitigation: your landing zone will include cloud controls spanning security, data, operations and finance.

// Regular patches and upgrades: your CLZ service will be regularly updated to reflect new best practice as well as updates from AWS - at no additional cost to you.

Pricing

	Premium	Enterprise	Multi-region
Regions (countries)	1	1	Unlimited
Instances per payer account	3	Unlimited	Unlimited
